

BINITH JAYASINGHE

SOFTWARE ENGINEER | BACKEND • FULL-STACK • AI

Melbourne, VIC | 0452 516 327 | jpbinit@gmail.com | [LinkedIn](#) | [GitHub](#) | Full Australian work rights

PROFESSIONAL PROFILE

Software Engineer with 4+ years of experience and a Master of Artificial Intelligence (Distinction) from RMIT University. Currently building production AI solutions, including LLM-powered document processing and Retrieval-Augmented Generation (RAG) systems, while delivering scalable enterprise software and distributed backend services. Experienced across backend, full-stack and AI engineering, with a focus on designing reliable, maintainable systems that address practical business needs.

TECHNICAL SKILLS

Programming Languages	Python, Java, TypeScript, JavaScript, SQL
Backend Development	Django, Flask, Spring Boot, Node.js, NestJS, Express, .NET, REST APIs, GraphQL, SOAP, Microservices
Frontend Development	React, Next.js, Vue.js, Angular, HTML, CSS
AI & Machine Learning	Generative AI, LLM, RAG, LangChain, Prompt Engineering, Embeddings, Intelligent Document Processing, OCR, Model Inference, AI Evaluation
Cloud & DevOps	AWS (EC2, S3, Lambda, API Gateway, ECS, ECR), Microsoft Azure, Oracle Cloud Infrastructure (OCI), Docker, Kubernetes, Jenkins, Nginx, CI/CD
Databases	PostgreSQL, Oracle Database, MongoDB, Vector Databases
Software Engineering	System Design, Distributed Systems, Event-Driven Architecture, Testing, Debugging, Refactoring, Code Reviews, Agile/Scrum

PROFESSIONAL EXPERIENCE

AI Software Engineer Triple A Super Melbourne, VIC	Mar 2025 – Present
- Deliver and enhance a full-stack adviser and fund-management platform used by 10,000+ active users, built with Python, Django, Vue.js, Oracle SQL, AWS and OCI. - Develop backend APIs, scheduled jobs and integrations that synchronise financial data, documents and workflow information from external platforms. - Designed and deployed LLM-powered document-processing workflows combining smart OCR, model inference and automated validation, enabling automated extraction and classification of financial information. - Built a Retrieval-Augmented Generation system and LLM-based document classifier integrating embeddings, MongoDB, AWS S3 and enterprise data sources. - Own production deployments and operational support across Docker, Nginx and CI/CD pipelines, reducing deployment time by 50% while resolving application, integration and infrastructure issues to improve platform reliability. - Partner with technical and non-technical stakeholders to convert business requirements into production-ready AI and software features.	

Senior Software Engineer | SyscoLabs | Sri Lanka**Mar 2023 – Feb 2024**

- Delivered full-stack features for Sysco's large-scale e-commerce platform serving 50,000+ daily users across the United States and Canada, with backend services processing millions of requests per day.
- Built and enhanced full-stack and distributed services using Java, Spring Boot, Node.js, React, JavaScript/TypeScript, REST, GraphQL and AWS.
- Implemented personalised rewards, discount workflows, customer-specific promotions, product recommendations and other high-traffic features.
- Worked across product and engineering teams to clarify requirements, coordinate dependencies and integrate services in a microservices environment.
- Improved maintainability through debugging, refactoring, reusable implementation patterns and code reviews while mentoring around three junior engineers.

Software Engineer | FcodeLabs | Sri Lanka**Sep 2021 – Mar 2023**

- Designed and developed an enterprise production-management platform for Brandix Sri Lanka using Node.js, NestJS, Angular, GraphQL and AWS, supporting approximately 500 operational users.
- Built serverless backend services with AWS Lambda and developed OCR-based purchase-order and invoice-processing workflows.
- Created APIs, data integrations and frontend features for order placement, production tracking and operational reporting.
- Worked directly with client stakeholders to clarify requirements, propose technical solutions and deliver automation features.
- Reviewed code and guided around five junior developers on implementation, debugging and engineering practices.

Software Engineer | Axiata Digital Labs | Sri Lanka**Feb 2021 – Sep 2021**

- Developed Java and Spring Boot backend services for a large-scale distribution-management platform used by a major telecommunications provider.
- Built REST APIs using Hibernate, PostgreSQL and Oracle and integrated third-party services.
- Contributed to modernising monolithic workflows into scalable microservices and supported systems serving 10,000+ users and millions of daily transactions.

EDUCATION

Master of Artificial Intelligence – With Distinction

RMIT University | Melbourne, VIC

Feb 2024 – Nov 2025**BSc (Hons) in Computer Science – Second Class Upper**

University of Sri Jayewardenepura | Sri Lanka

Aug 2015 – Aug 2019**RESEARCH & LEADERSHIP**

- Published “Data-Driven Technique for Finding an Optimal Image Processing Pipeline” at ICTer 2021 ([IEEE Xplore](#)); developed a Python and genetic-programming approach to automate pipeline optimisation.
- President (2019) and Vice President (2018), Society of Computer Science, University of Sri Jayewardenepura.
